# Anaesthesia - Topical

#### Description

ALA (Laceraine): Sterile wound anaesthetic: 5 ml vial

- Adrenaline 0.1%w/v (1:1000 or 1 mg/ml)
- Lignocaine HCL 4% M/V (40 mg/mL)
- Tetracaine (Amethocaine) 0.5% (5mg/mL)
- Onset: 20-30 minutes
- Duration: 30-60 minutes

#### Indications

- Topical use on **broken** skin
- Local anaesthesia for wound management (cleaning, closure)
- Haemostasis

#### Contraindications

- Do not use on digits, pinnae, tip of nose, penis or other end arterial areas
- · Not for dental use or where entry into major vessels may occur
- Not meant for use on intact skin consider EMLA®
- Do not apply to mucous membranes
- Do not use on wounds > 7 cm, bites, contaminated or complex wounds, burns, extensive abrasions
- Do not use in patients with hypersensitivity to any local anaesthetic

#### **Adverse Reactions**

• Systemic toxicity is rare and invokes mainly CNS (usually first) and CVS: restlessness, dizziness, tinnitus, nausea and vomiting, tremors, convulsions, later depression.

- Numbness of the tongue and perioral region may be an indicator of early systemic toxicity.
- Cardiac effects are myocardial depression and vasodilation.

#### **Dosage / Preparation**

Use a syringe: Draw up 0.1 mL/kg (maximum of 3mL) from the 5ml vial
0.1mL/kg = 4mg/kg of lignocaine

#### Administration

- Clean wound removing debris and clotted blood
- Wearing gloves
  - Soak cotton wool ball/s with the ALA and apply to wound
  - Cover cotton balls and area around wound with Tegaderm<sup>™</sup>/Opsite
- Advise child/carer
  - May sting on first application
  - Not to interfere with site
- Leave for 20-30 minutes (maximum 60 minutes)
  - Test sensation prior to further treatment
  - Blanching at edges is usual
- Supplemental 1% lignocaine can be used intradermally as long as a total lignocaine dose does
- not exceed 5mg/kg
  - Maximum additional lignocaine dose 1mg/kg = 0.1mL/kg of 1% lignocaine
